

April 28, '09

- compiled chi2, same as sharp integ-2 but no "objs" (no numerical recipes. got (chi2.c from zamin today).

~~message~~

- working in a directory called "late April"
I recreated 130, 230, 330, and a30 and ran chi2. Got 1.600262 and 1.547325.

Compare with page ~~109~~ 109. Seems to be a minor disagreement but the old printout I have matches this exactly.

Chi2 works

fit gauss requires three new recipes. I got them from my "paid-for" recent download (not what Darren sent). I compiled them as on page 150. I added their names to the makefile. Then I compiled and it worked. So far so good.
